ABSTRACT

Geographic distribution data on pharmacy students are gathered only in alternate years. This report contains data presented for full-time students enrolled in the final 3 years of both 5- and 6-year professional programs. Special and part-time students, and Pharm. D. students already holding a B.S. in pharmacy are excluded from these counts. Table I presents data on the sources of students enrolled in each of the colleges. The data indicates a slight movement toward greater student mobility across state and national boundaries. It is also interesting to note among the colleges, that state supported institutions seem to be enrolling a higher proportion of in-state residents, while private colleges are admitting more persons from other states. A breakdown of students by geographic source and college where enrolled is presented in Table II. Table III presents undergraduate foreign student distribution. (Author/PG)

A STUDY OF THE GEOGRAPHICAL DISTRIBUTION OF UNDERGRADUATE PHARMACY STUDENTS FOR THE ACADEMIC YEAR 1973-1974

Geographic distribution data on pharmacy students are gathered only in alternate years. Comparable statistics to those found in this report were published for the 1971-1972 academic year (Journal, 36, 131, (1972)). Data is presented for full-time students enrolled in the final three years of both the five- and six-year professional programs. Special and part-time students, and Pharm.D. students already holding a B.S. in pharmacy, are excluded from these counts.

Table I presents data on the sources of students enrolled in each of the colleges. The first column contains the number of students enrolled from the state in which the college is located and the second column reports the number from other states and Canada. The second column also includes the District of Columbia, Guam, Puerto Rico, American Samoa, and the Virgin Islands. Those students from foreign countries are found in the third column.

The data indicates a slight movement toward greater student mobility across state and national boundaries. In 1971-1972, 81.7 percent were enrolled in colleges in their own state and this proportion has now fallen to 79.4 percent. Out-of-state enrollments are about the same between the reporting periods but foreign students have increased proportionally from 2.7 to 4.3 percent. Since the previous report, some controversy has arisen in higher education on the institutional definition of in- and out-of-state students and their relationship to fee requirements at publicly supported institutions. It is likely that this development would tend to inflate the number of students reported from the state in which the college is located. It is also interesting to note among the colleges that state supported institutions seem to be enrolling a higher proportion of in-state residents, while private colleges are admitting more persons from other

states. This is probably the effect of compounded forces such as the aforementioned definitional problem, increased application, incentives to increase enrollments, and budgetary strains on both private and public institutions.

The number of colleges with the majority of students coming from other states and countries has risen from four to six. These are Howard University - 90.6 percent, Creighton University - 68.2 percent, Idaho State University - 60.4 percent, St. Louis College of Pharmacy - 55.9 percent, Samford University - 54.7 percent, and Drake University - 52.1 percent. As might be expected, most of the colleges are not publicly controlled institutions. Other colleges with relatively large out-of-state enrollments are: University of Wyoming - 49.7 percent, University of Rhode Island - 49.6 percent, Mercer University - 48.6 percent, Florida Agricultural and Mechanical University - 47.8 percent, Northeastern University - 46.0 percent, University of Utah - 41.0 percent, Philadelphia College of Pharmacy and Science - 39.8 percent, Xavier University of Louisiana - 39.3 percent, North Dakota State University - 37.5 percent, University of Arizona - 37.3 percent. All other colleges had nonresident enrollments of one-third or less.

The St. Louis College of Pharmacy enrolls the largest number of U.S. and Canadian students from places other than its own state. St. Louis College of Pharmacy, with 212 students in the category, is followed by Philadelphia College of Pharmacy and Science, North Dakota State University, Mercer University, Samford University, Massachusetts College of Pharmacy, Idaho State University, University of Rhode Island and Drake University, all of whom have over 100 out-of-state students.

A breakdown of students by geographic source and college where enrolled is presented in Table II. Among the various states and other political jurisdictions, only North Carolina has fewer residents studying pharmacy in 1973-1974 than reported in 1971-1972. Alaska, Nevada, American Samoa and the Virgin Islands have experienced no change between the reporting periods. The largest increase was in New York, with a net gain of 418. Other significant increases were observed in Michigan - 365, Ohio - 326, Pennsylvania - 285, and California - 250.

The following jurisdictions all reported increases of 100 or more students: Illinois, Puerto Rico, Oklahoma, Indiana, Massachusetts, and New Jersey. On a proportional basis, Vermont demonstrated the greatest increase at 88.9 percent, even though the change in absolute numbers is only eight students. Other leading percentage increases were made in the following jurisdictions: Rhode Island - 69.4 percent, New Mexico - 66.6 percent, Michigan - 53.9 percent, Ohio - 49.6 percent, New York - 41.7 percent. Several other states had increases of one-third or more: New Hampshire, Arizona, Oklahoma, Maine, North Dakota, Massachusetts and Indiana.

All jurisdictions without colleges of pharmacy sent students to pharmacy colleges located elsewhere. Residents of Alaska, Guam, Hawaii, Nevada and American Samoa were enrolled in pharmacy programs and, as expected, the majority were located in the western states. Geographic proximity also seemed to influence students from the three northernmost New England states, with most of them choosing colleges in adjacent or nearby states. The Philadelphia College of Pharmacy and Science attracted 73.9 percent of all Delaware residents enrolled in pharmacy colleges.

Among states with colleges of pharmacy, Illinois residents were most numerous among the enrollments of out-of-state colleges as 443 were enrolled in schools in other jurisdictions. California followed in this category with 323 obtaining pharmaceutical education beyond the borders of the state. On a proportional basis, New Jersey was the only state with a pharmacy college in which more than half of the pharmacy students were enrolled in institutions outside of the state. The states with the largest percentage of students attending colleges out-of-state are as follows: New Jersey - 56.5 percent, Illinois - 48.3 percent, Kentucky - 36.3 percent, Connecticut - 30.5 percent, Arkansas - 28.8 percent, District of Columbia - 27.3 percent, Tennessee - 26.5 percent, California - 23.6 percent.

The 1971-1972 study reported a remarkable increase of 100 percent over the 1969 findings. This year from that now considerably inflated base, the colleges report an even more remarkable 103.7 percent increase. The number and national origin of these 915 students is summarized in Table III. Again, Hong Kong is the leading source of foreign students as it accounts for 34.7 percent of the total. The 129.3 percent increase of Hong Kong students is not the only source of the foreign increase. For example, students of Cuban origin have risen from four to 56 and Nigerians now number 127, compared to only 37 two years ago. In order to conserve space, national origins of foreign students are not reported by college. However, Howard University continues to lead with 94, followed by Brooklyn College of Pharmacy - 56, Florida Agricultural and Mechanical University - 43, University of Southern California - 42, Massachusetts College of Pharmacy - 32, University of Texas - 32, University of Houston - 31, and University of Wisconsin - 31.
